Helideck designed for maximum friction and reduced need for utilization of landing net.

Standard Equipment: Tie down points also designed for helideck lifting operations.

Safety net on the helideck perimeter.

Drainage gutter.

Brackets for marking- and flow-lights.

Marking paint.

Optional Equipment: Platforms, stairs and ladders.

Landing net.

Marking/flood lights and wind cone.

Fire fighting equipment.

Hinged decks.

General information

The high friction helideck is a Norwegian product supplied by MARITIME PRODUCTS AS(MP). Development, sales/marketing, planning, procurement, engineering, QA and project management is handled directly by MP. MP is the owner of the profile production tools, special tools for machining of the helideck surface, tools for assembly etc. The prefabrication of components is subcontracted to a next-door aluminium workshop.

The HELIDECK is usually handed over either in two deck halves or in one piece or as a material package where the yard or MP assemble the deck at the yard.

The deck is designed to fulfil any requirements stated by rules and regulations or requirements put forward by customer. Our employees possess long experience from deliveries of helidecks to markets such as offshore, supplyships, shuttletankers, office towers and hospitals around the world.
